

ext: extended feature due to a missing stop codon

	CDS (single exon)	CDS (multi-exon)	mature peptide (MP#i)	CDS (made up of mature peptides)
No errors				
ext (extension) first in-frame stop codon exists 3' of predicted stop				

Example output from annotation script:

HM631854	14	MP#14	ext	first in-frame stop codon exists 3' of stop position predicted by homology to reference [homology search predicted 7544..10230 revised to 7544..10288 (stop shifted 58 nt)]
HM631854	15	CDS(MP)#1	ext	first in-frame stop codon exists 3' of stop position predicted by homology to reference [homology search predicted 74..10233 revised to 74..10291 (stop shifted 58 nt)]
